Note to Teachers

The content may not be appropriate for all children as some students might find some of the information within this PowerPoint quite upsetting depending on their own beliefs.

Did you know that nearly all of the food we eat comes from either an animal or a plant?

Name That Vegetable!

What vegetables are these?

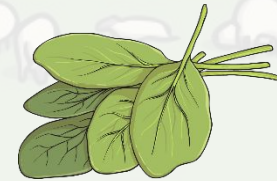

carrot

onion

celery

spinach

broccoli

cauliflower

potato

brussels sprouts

Do these vegetables come from plants or animals?

Plants!

[Reveal Answers!](#)

Parts of a Plant

Which part of the plant is which?

flower

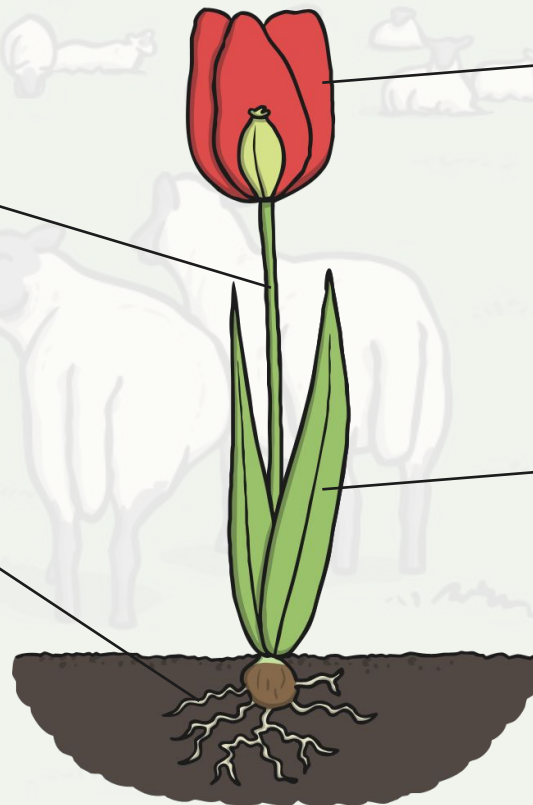

flower

stem

roots

roots

leaf

Reveal Answers!

Foods From Plant

We can eat some parts of different plants. We don't eat all plants because some are poisonous.

Cauliflower is the flower part of the plant.

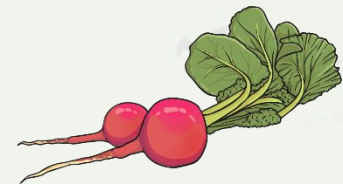

Celery is the stem of the plant.

Cabbages are the leaves of the plant.

Parsnips and radishes are the roots of the plant.

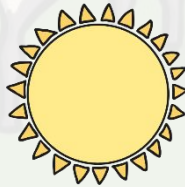

Growing Vegetables

Vegetables don't grow in the supermarket.

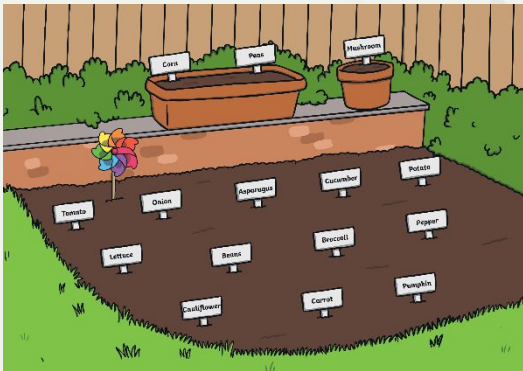

Farmers prepare the land by making small holes in the earth. The seeds are then planted into these holes. The holes are covered with earth and rain and sunshine helps the plants to grow.

When the vegetables are ready, they are picked (harvested). Some vegetables are harvested by hand and others by machine. The vegetables are then sold at markets or to shops.

Growing at Home

Many people grow their own fruit or vegetables at home in their garden, greenhouse or on allotments.
e

Before You Eat or Drink

Once vegetables and fruit are picked, they need to be washed before being eaten.

Some fruit or vegetables are peeled before being eaten. Can you think of any?

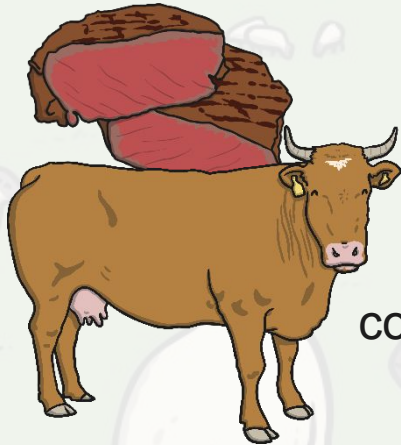

We can't drink milk straight from the cow. It needs to be heat treated first.

We have to cook meats such as chicken, prawn and lamb before eating them.

Reveal Answers!

Do these foods come from a plant or an animal?

beef

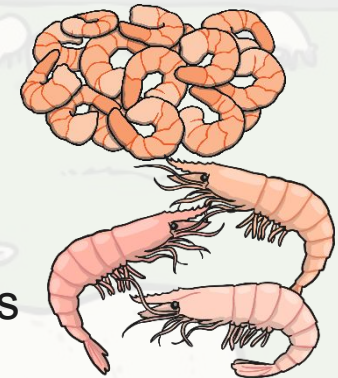

cow

chicken

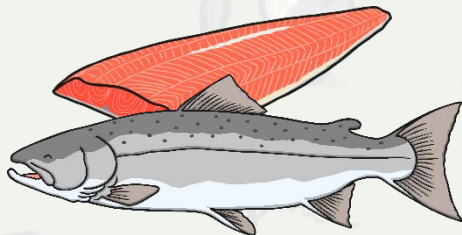

chicken

prawns

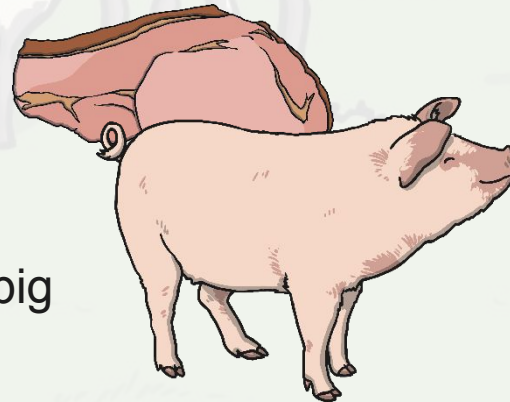

prawns

salmon

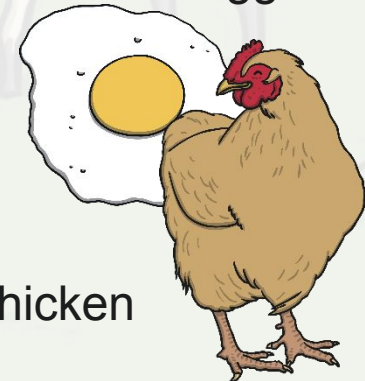

salmon

bacon

pig

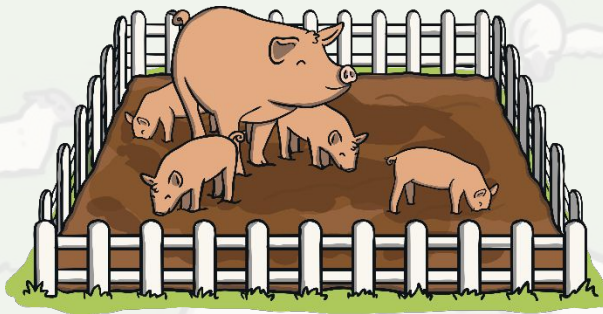

egg

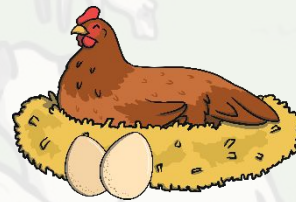

chicken

Animals On the Farm

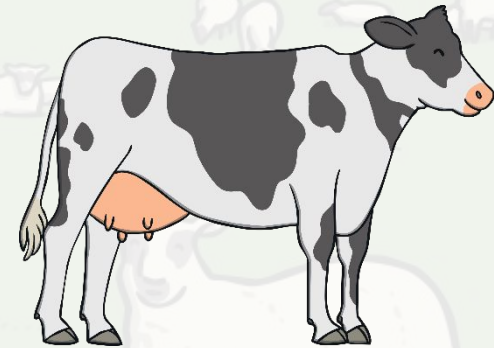

pigs

chickens

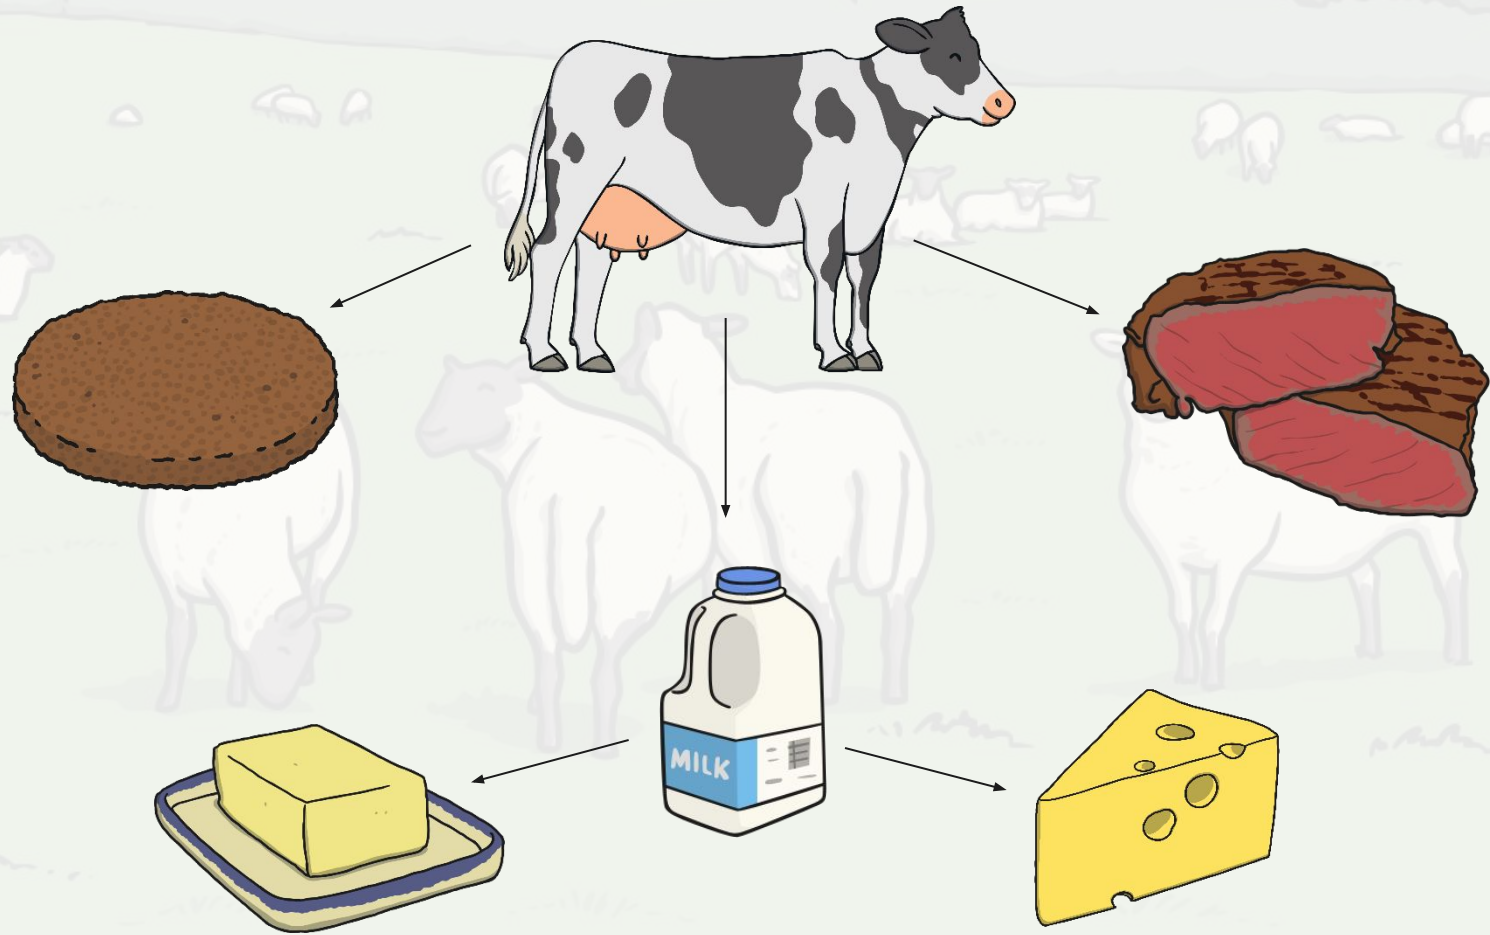

cows

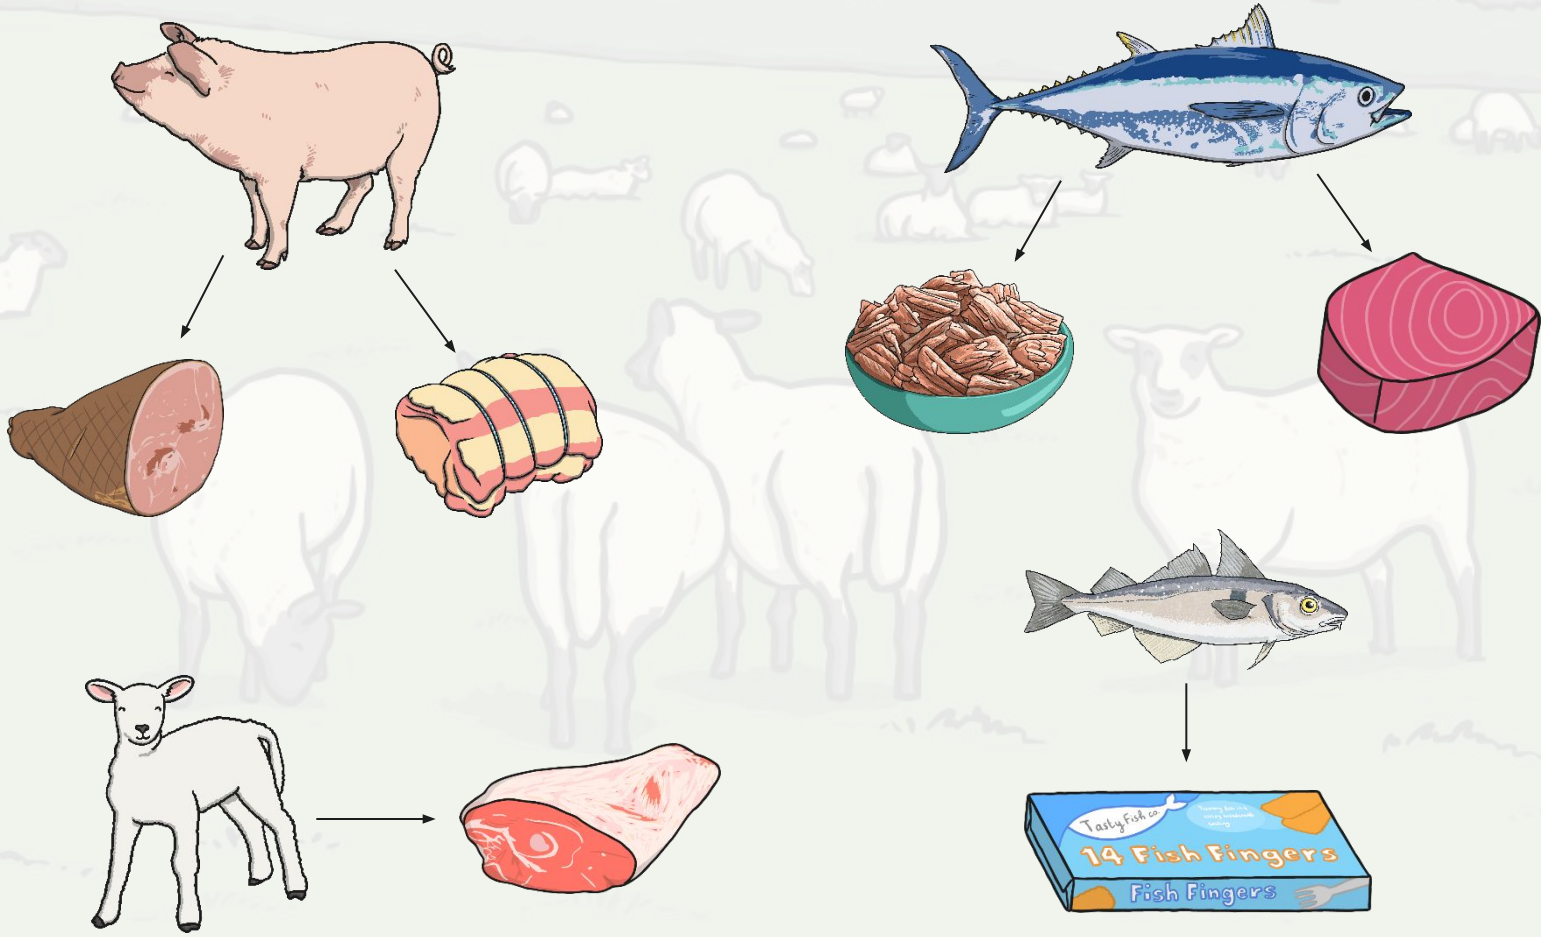

Can you think of any other farm animals?

Do we get food from these animals?

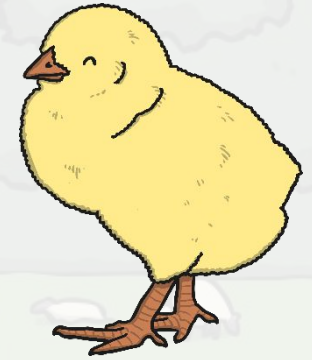

Meat and Dairy from Cows

Meat From Other Animals

Farming Poultry

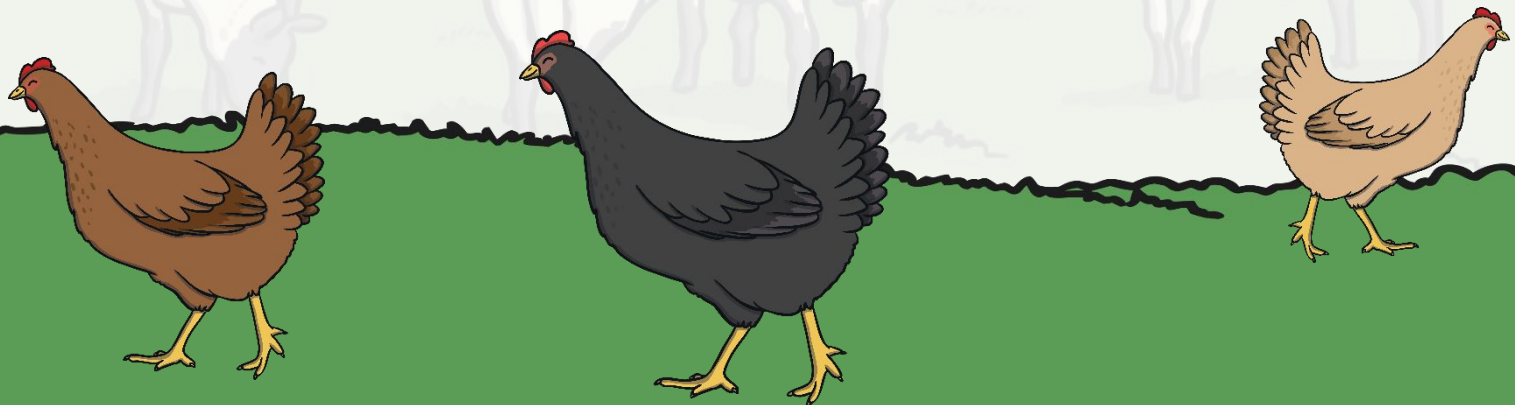

Chicks come to the farm and are fed a special diet with water.

When they are 18 weeks old, they go to breeding farms.

The birds mix with roosters and start laying eggs. The eggs are collected and taken to the hatchery where they are kept warm.

After about 21 days, the eggs hatch.

The chicks are then taken to farms and grown to different weights.

Fish

Some fish are caught for food. Most of these fish are caught by fishermen at sea or farmed in fish farms.

The fish are packed in ice to keep it fresh. It is brought back to the docks, where it is sold to shops.

The fish might be filleted when you buy it. This means the parts which are good to eat are kept, and the parts which aren't good to eat are thrown away.

Where Food Comes From

Food from Other Countries

Some food is produced in other countries and sent to us as we don't have the right soil or weather for it to grow.

Some examples:

rice

mangoes

oranges

lemons

s

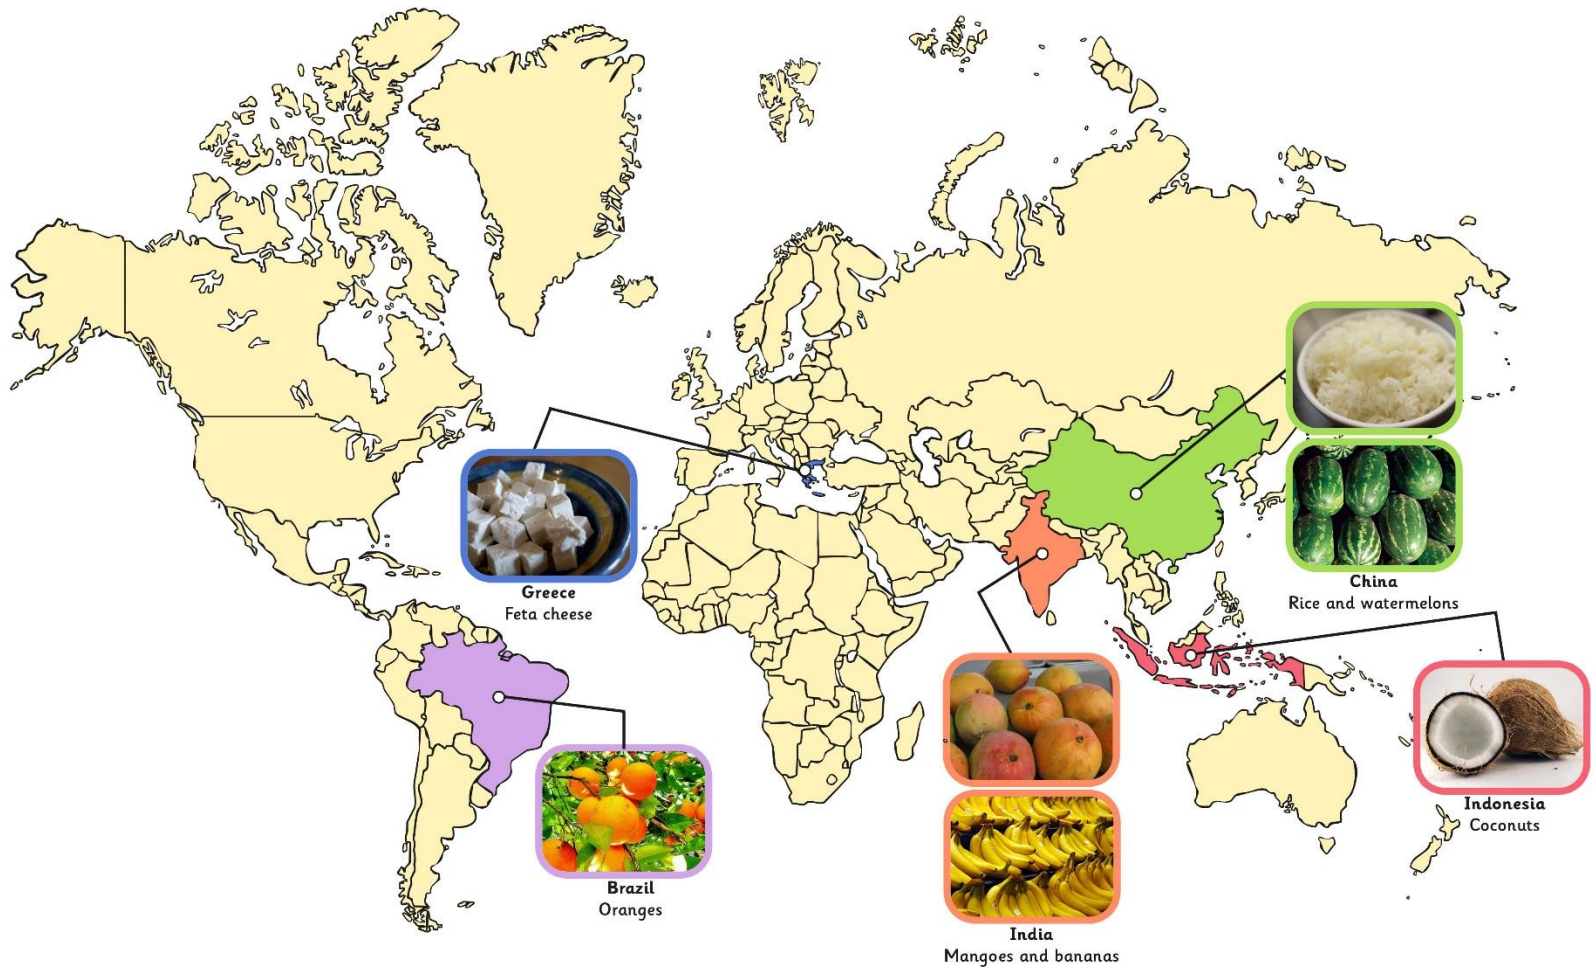

bananas

coconuts

Next time you are at the supermarket, have a look at the packaging and see where your food has come from!

Where Food Comes From

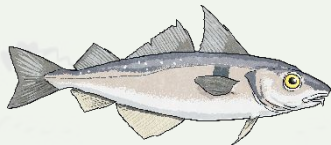

Plenary

Does strawberry yoghurt come from a plant or an animal?

What processes do you think happen in between catching the fish and buying a box of fish fingers from the shop?
